

Integrating IT with deep business expertise to raise client business value

Advanced integration capability and system lifecycle support

How do you make best use of IT to raise your business value? No company can afford to ignore this question any longer, and finding the right answer can enormously affect its corporate competitiveness and value. Having outstanding integration ability means being constantly alert to new technologies amid accelerating technological innovation, understanding the client's business needs, and combining products and services to create leading-edge information systems. NSSOL has this integration ability. For business value to continue to rise, information systems must continuously improve and evolve in step with advances in technology and changes in the business environment. By providing total support across the entire system lifecycle, from planning and development to operation, NS Solutions enhances business value for its clients.

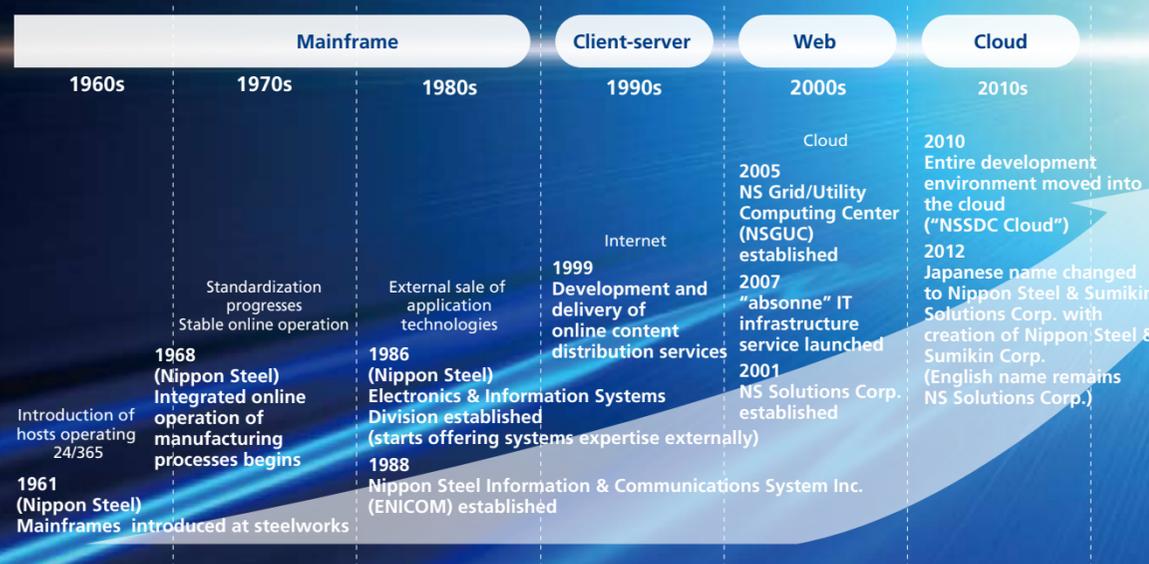

Steel is in our DNA, attention to human resources in our veins

We grew out of the Information Systems Division of Nippon Steel, which is a major IT user. Steel industry systems have to work round the clock, 365 days a year, to provide strategic business management and precision production control functions. Our integration capabilities and expertise in system lifecycle support, honed through experience on the mill floor, are the steel embedded in NS Solutions' DNA. Backed by inside-out operational knowledge, cutting-edge technologies, and hands-on skill, we deliver systems offering true value to support our diverse clientele's use of IT in a range of industries. Developing the human resources to further enhance these strengths is a top priority, and we spare no effort to ensure our employees are equipped to think and act for themselves to give our clients the solutions they need.

NS Solutions continues to evolve

As IT grows more diverse and business becomes more complex, it is essential to get the most out of IT more swiftly and more efficiently. We are always researching trends in IT, trialing and applying the best to raise business value and transform work styles so that advances translate into business opportunities for our clients. In order to actively meet your need to utilize diverse information systems, we deliver information systems as a service as well as in the form of conventional on-premise deployments. And we are even more aggressively involved in developing information system services to meet your needs. With steel and manufacturing in our DNA, we will continue to grow with the times, fueled by transformational changes in IT such as the move to open, Internet, and cloud-based services. That is our mission at NS Solutions.

NS Solutions - Always at the Leading Edge

Representative Director & President

Munetaka Shashiki

Born in 1953, Munetaka Shashiki joined Nippon Steel Corporation after graduating in Economics from the University of Tokyo in 1977. He received his MBA from Cornell University in 1987, and in the same year was assigned to the Planning and Coordination Department in Nippon Steel's Electronics & ICT Division. After becoming head of the No. 1 Financial Solutions Division in 2001, he was made a director and head of planning and general affairs in 2005. He was appointed managing director in 2009, and representative director and president of NS Solutions in April 2012.
